Portfolio 1 Factsheet

Portfolio Objective

This portfolio is for those who want to take a small amount of risk to achieve their investment goals.

Investments in this portfolio will primarily be made in defensive assets i.e. Cash and Fixed Interest. The aim of using these assets in the portfolio is to provide security rather than maximising return, limiting the chances of any dramatic changes to the value of the portfolio in the short term. The remainder of the portfolio will be invested in a small proportion of growth assets i.e. equities. This adds an element of risk to your investment but aims to provide some capital growth over the long term.

Representative Portfolio Fees

Management Charge

0.35%

Fund Charge

0.15%*

Total Charge inc. VAT

0.50%*

*Based on the fees payable as at 20/04/2021, sourced from FE Analytics. Fees are variable and may exceed this representative example.

Key Facts

Fund Manager:

OpenMoney

Launch Date:

April 2017

Pricing Frequency:

Daily

Benchmark:

Consumer Price Index (CPI)**

Portfolio Structure:

OpenMoney portfolio 1 contains a combination of index funds giving investors access to a globally diversified portfolio***

**The consumer price index tracks changes in the prices of around 700 goods and services consumed by a typical household. The CPI basket is regularly updated to reflect changes in spending habits so that it can continue to be representative in terms of typical household spending patterns. This index is used as a measure of inflation in the UK.

***The legal structure of the funds that OpenMoney use to build this portfolio are Open Ended Investment Companies (OEICs) and Undertakings for Collective Investment in Transferable Securities (UCITS). When you invest in this portfolio, you will be directly invested in the individual funds we have chosen to populate the OpenMoney portfolios.

Investment Strategy

OpenMoney use a strategic passive investment strategy. This means that our asset allocation is the main focus in determining the portfolios overall risk and return. The asset allocation we use has a truly global focus that comprises equity and bonds from around the world, offering our customers a high level of diversification. To maintain our strategy, we monitor and make any changes to the portfolio where necessary, while sticking to the belief that investments should be viewed over the long term.

The tables above display actual past performance data for this portfolio net of all fees and charges. Portfolio fund allocations, meaning the percentage invested in each fund, are based on current and previous allocations set throughout the duration of the portfolio. Changes are determined by our investment committee. The rolling performance shows you the gain (or loss) of the portfolio, as a percentage, over a defined time period. The percentage figure shown under each of these columns represents the growth or loss of the portfolio for each period. The cumulative performance figures tell you the gain (or loss) of the portfolio and how it has performed overall, whereas the rolling performance enables you to see how consistently the portfolio has performed by looking at the portfolio's performance during a particular period.

Important Information

Please remember that past performance is not necessarily a guide to future performance, the performance of funds is not guaranteed and the value of your investments can go down as well as up, so you may get back less than you initially invest. There is no guarantee that a diversified portfolio will increase returns or outperform a non-diversified portfolio. Neither diversification nor asset allocation ensure a profit or guarantee against loss.
